# RSVP Message Processing Rules
## draft-lindell-rsvp-procrules-00.txt

Bob Lindell

USC/ISI

# Issues

- RFC 2209 describes the ISI reference implementation

  - Named variables

  - Loops and branching

- Fix errors

- Clarification of RSVP specification (RFC 2205)

# Goals

- More abstract description

- Use set operations

- Minimal state block descriptions

# Clarification of RSVP Specification

- Confirmation processing requires orderable flowspecs

- Varying ADSPECS trigger excess PATH messages

- Fwd_Flowspecs may trigger a change in reservations

# Future Work

- Is this useful enough to be completed?

- Should we add back RFC 2209 as an appendix?
